

Zentron Visitor and Employee Sign-In Kiosks with Temperature Scanning

Battery-Powered Configuration

Battery-powered configuration for Zentron kiosks

LamasaTech has engineered a new battery pack design to power the Zentron kiosks for 12-24 hours of continuous battery operation. While the design has been stress tested to cover more than 24 hours, we benchmark the system for 12 hours depending on usage, meaning your battery can be charged at night to provide continuous power throughout the day.

- ✓ Cable-free solution perfect for any indoor location
- ✓ Sleek streamlined design
- ✓ 12+ hours continuous operation
- ✓ Lockable case prevents tampering and secures the power button and plugs
- ✓ Quick and easy removal of battery from case for charging or charge the battery while the device is in use
- ✓ Compatible with all models - Zentron 15, Zentron 8 (Gen 2) and LD-AITemp-Device (Gen 1)
- ✓ Pairs with 3 kiosk configurations - attach to the floor stand*, secure to a wall for use with a wall mount kiosk, or use with a desk mount kiosk

*The battery pack and casing fits our current floor stand design. If you have an older model, you may require a new stand for compatibility.

Product codes

LT-Zentron-BA50-ACC

Zentron Battery Pack with Case, Cables
and Charge Adapter

LT-Zentron-BP50-PRT

Zentron additional battery pack only
